

How To Change From One Live Account To Another.

Brought to you by www.forex-goldmine.net

Moving your trading robot to the new account:

- I. When beginning the process of switching your robot from one live account to another the first thing you need to do is sign into your members area on our website:
<http://www.forex-goldmine.net/members/login>.
1. When in your member's area, click on "Change Account Number" under the Main Menu on the left hand side of the page.

2. Here you will enter your new broker and new account number and click “”. By entering it into the website first, it will immediately send notice to change your information in the programmer’s database.
 - a. What will happen to the open trades on the old account when the EA is removed/expired?
 1. Any open trades will remain open on the old account, will not be controlled by the EA, but will close by attrition when they reach their TP point. You cannot open the same trades on the new account that you had on the old account since the price will not be at the same point where the previous trades opened.
3. To transfer your EA to the new account, you will be moving the .ex4 file from the experts folder of your old broker to the experts folder of you new broker and moving the dll file from the libraries folder of your old broker to the libraries folder of your new broker, or simply loading the EA onto the chart of a new account with the same broker.

Transferring funds to open your new account:

II. How much do I withdraw from my old account to open a new account?

1. *****It is a good rule of thumb when opening an account to commit yourself to a base amount that will be enough to support your trades that are open. This becomes your zero point.**
2. As an example, let us say you opened an account with \$18,000. Account #123.
 - a. Trading at 0.01 micro lots
 - b. BalanceFactor = 4500
 - c. The RoboMiner then trades 0.04 lots, 0.01 lots traded for every \$4500 of your \$18,000 balance. So \$18,000 is your zero point.
 - d. You can have up to 33 trades open at a time with the RoboMiner, Pro and GT-Shadow, or more if you have expanded your range beyond 66 Instances.

- e. Any profit over the \$18,000 can be withdrawn at any point because the \$18,000 is sufficient to cover the trades you have open with the current lot size and BalanceFactor.
 - i. If you earned \$2000 profit over the past year and your balance is \$20,000, the RoboMiner is still trading 0.04 lots with the 4500 BalanceFactor. Even if you still have 33 trades open, you can safely withdraw the \$2000 leaving the \$18,000 base amount to cover the trades remaining open.
 - ii. Let's say most of your trades close and you only have 12-13 trades open. In our example with the \$2000 profit making your balance \$20,000, you can safely withdraw the \$2000 profit PLUS \$1-2,000 more from the account. The remaining \$16,000 would be sufficient to cover the few trades open and the RoboMiner will adjust to trade 0.03 lots for future trades open with the \$16,000 balance and the 4500 BalanceFactor.
- 3. How do I follow these withdrawal suggestions with an account I want to close to open another account with these same funds?
 - a. Continuing with our example of account #123, with \$18,000, 0.01 lots, and BalanceFactor 4500, let's say you want to open account #456.
 - b. Withdraw your profit above your base amount to open your new account with, (i.e. you have \$23,000 in the account, \$18,000 is your base amount and \$5,000 profit. You would withdraw the \$5,000 profit to use to open Account #456.
 - c. Now you have account #456 open with a balance of \$5,000 (0.01 lots with BalanceFactor of 4500 for example).
 - d. Now you can follow the instructions at the beginning of the tutorial to move your EA from the account #123 to account #456. The EA will control the trades on the new account #456 and will no longer be controlling the trades on the old account #123.
 - e. As the trades close by attrition on account #123, you can begin withdrawing the funds from the base amount of \$18,000 in small withdrawals, or wait until all trades are closed to withdraw the entire amount.
 - a. For example, you have 32 trades open at the \$18,000, 0.04 lots, 4500 BalanceFactor. 8 trades close, you withdraw \$3,000.

- b. Now there are 24 trades open with \$15,000. Another 6 trades close, you withdraw \$3,000.
 - c. Now there are 18 trades open with \$12,000. Another 10 trades close, you withdraw another \$3,000.
 - d. Now there are 8 trades open with \$9,000. 4 more trades close and you withdraw \$2,000.
 - e. Now there are 4 trades open with \$7,000. 2 more trades close and you withdraw \$2,000.
 - f. Now you have 2 trades open with \$5,000 in the account. The final 2 trades close and you withdraw the remaining \$5,000 from your account.
- f. Or as stated above, you can wait until all trades close to withdraw the \$18,000 base amount left in account #123.
- g. You can then deposit the \$18,000 into account #456 or use it as you please!

CFTC RULE 4.41 - HYPOTHETICAL OR SIMULATED PERFORMANCE RESULTS HAVE CERTAIN LIMITATIONS. UNLIKE AN ACTUAL PERFORMANCE RECORD, SIMULATED RESULTS DO NOT REPRESENT ACTUAL TRADING. ALSO, SINCE THE TRADES HAVE NOT BEEN EXECUTED, THE RESULTS MAY HAVE UNDER-OR-OVER COMPENSATED FOR THE IMPACT, IF ANY, OF CERTAIN MARKET FACTORS, SUCH AS LACK OF LIQUIDITY. SIMULATED TRADING PROGRAMS IN GENERAL ARE ALSO SUBJECT TO THE FACT THAT THEY ARE DESIGNED WITH THE BENEFIT OF HINDSIGHT. NO REPRESENTATION IS BEING MADE THAT ANY ACCOUNT WILL OR IS LIKELY TO ACHIEVE PROFIT OR LOSSES SIMILAR TO THOSE SHOWN.

No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently achieved by any particular trading program. Hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk in actual trading.
