

How to Earn 6% Monthly on your Money

(Without Sacrificing Safety)

Let's face facts: everyone wants a decent return on their money. This is especially true when you consider the fact that inflation is a constant parasite that eats away at our savings on a daily and monthly basis. People expend an amazing amount of emotional angst as they watch the fluctuation of CD rates at their local bank, wondering if they should renew now, or wait for a better rate. And there is always the question of how long a term to lock in upon renewal; 6 months? 1 year? What if you renew for a year and the rates zoom up another percentage point in 3 months?

What if I told you that there is a way to move way beyond those CD rates and earn rates of return that up until now have only been enjoyed by the super-rich; those with extremely fat wallets and banking connections that you and I could only dream about? While the average CD holder would be thrilled to get 6% per year in today's market, I am talking about rates of 6% and even slightly better than that on a monthly basis. Now, before you accuse me of smoking some funny kind of tobacco, I want to assure you that I am entirely serious in suggesting this possibility to you. And not only that, there are some safety prerequisites that I have established that a candidate investment must meet before I will consider it. I will tell you with a straight face that I have come to the place where I do not get excited about looking at an investment unless it returns a minimum of 6% per month and on top of that, does so with relative safety. Impossible you say? Well, please reserve your judgment and read on.

Why 6%?

First of all, why is 6% such an important rate? Why not 5 ½ % per month? The answer lies in what is known as the "Rule of 72". The Rule of 72 states that when you are compounding an investment, if you divide the rate you receive in a given period into 72, the answer will be the number of periods it will take you to double your money. For example, if you are earning 3% per year in a savings account (that is high by today's standards), and you have \$1000 in that account, it will take you 24 years to double that money so that you have \$2000 in your account. Yikes! Even though that assumes I just leave the money there and never add any additional money, that is an awfully long time to wait. Unless you are starting out really young, you probably don't have enough time to grow your money at those rates.

But if you can earn 6% per month on your money, then you can double your account in 1 years' time! That is figured by dividing 6 into 72 which gives an answer of 12. Since we are dealing with months, that means your money is doubled in 12 months. Now that is something that I can work with! If I am doubling my money every year, and I can start with \$1000, then in 5 years, I will have \$32,000 and in 10 years my account can grow to \$1,024,000.00! So that is why 6% is such an important rate to aim for!

Additional Prerequisites

I mentioned earlier that there were additional criteria for my investments, as well as the 6% monthly return. Here are some of them:

- The funds must remain in an account that is under my sole control.
- The account must be with a trusted, regulated institution.
- The method of attaining the rate of return on my investment must be 100% legal.
- The method of investment must not monopolize my time so that I have to watch my computer screen 24 hours per day. I must be free to go about my other business during the day and sleep at night.
- There must be some safety factor built in so that I am not simply speculating wildly with my money.

Let me comment on that last point, first of all. Everyone knows that a speculator can make some fantastic rates of return. He or she may do well for a while, but sooner or later the piper must be paid his due, and most speculators end up losing most if not all of their nest eggs. On the other hand, you cannot expect to earn more than 4% per year without some level of risk beyond that of a deposit account at your local bank. To expect that would be unrealistic. The key is to reduce your risk to a known quantity, and take intelligent steps to mitigate that risk so that the likelihood of your losing your nest egg is drastically reduced.

The other criteria are rather self-explanatory. If the money is in an account that remains solely under my control, then I do not have to worry about funds being embezzled by intermediate money managers. If the institution that is holding my funds is regulated, then I have some expectancy that those who are running that institution have met at least some basic prerequisites with the licensing authorities. And of course, I would not want to be in a position where I was found to be making money in an illegal way, or, for that matter, in any way that hurt other people. I want to feel good about what I am doing.

I realize that I have drawn up a pretty tall order up to this point. The question remains, is it possible to earn 6% or better monthly on my money and still meet my other basic criteria? The answer is a resounding “Yes”!

I have found a method by which an average person can invest in the Forex Market and earn 6% or better per month on average, and still meet the other criteria that I have listed. Notice that I said “invest” and **not** “speculate”. There is a big difference. It is very easy to speculate in the Forex Market. In fact, 95% of new speculators in the Forex Market lose all their money within 6 months. And many people who think they are investing in the Forex Market are really speculating. Without going into all the reasons why that is so, let me just say that I am not one of them, and you do not need to be numbered among them, either.

One other point that I should mention is that if you know anything at all about the Forex Market, you may be wondering how I am fulfilling my next-to-last criteria of not having to monitor my account 24 hours a day. Many traditional Forex traders end up setting their alarm clocks to awaken them at 1 or 2 in the morning, because that is when the markets are the most active if you live in the U.S.A. That is when the Asian traders are most active and it is leading up to the time when the London traders are getting ready to come online as well. Well, the method I am going to tell you about requires none of that from you. Rest assured that you will be able to sleep through the night without having to awaken to monitor your trades at 3 AM.

Introducing the RoboMiner, from www.forex-goldmine.com !

Having said all of that, I am now ready to give you the details. The method of investing in the Forex Market involves a low-cost and easy to use computer program called the RoboMiner. **Imagine what it would be like to have a robot that does nothing but retrieve gold nuggets for you, day in and day out, from your own private goldmine!** The RoboMiner monitors the market for you, and executes trades on your behalf using a system that can be mathematically shown to be extremely safe in comparison with other Forex trading systems. And it never even asks for a salary or benefits! Yet, **historical testing has shown that it is capable of easily returning 6%+ per month on your account balance.** The program is available to you in the form of what is known as an “Expert Advisor” that runs on the trading platform of any Forex Broker that uses the Metatrader 4 trading platform. The good news is that there are a number of good brokers who allow you to trade using that platform, and so it is very easy to get started with this method of investment. In fact, you can start with as little as \$100 to \$250.00 with some brokers, although it would be better if you could start with at least \$1,000.

Like I said, this computer program, or expert advisor will monitor the market and trade for you, even while you are sleeping. You could go a whole week, theoretically, without even looking at your computer screen, and the expert advisor will not care. It will still be doing its job for you. The only requirement is that you must have your computer on and connected to the Internet so that the program can be doing its job for you.

What about the Safety Factor?

There are some programs/expert advisors out there that try to guess which way the market is moving. If they happen to be right on that guess, they will make you an amazing amount of money. But if they happen to guess wrong, they can also lose you an amazing amount of money in just a heartbeat. That is not the type of program or trading method I am talking about.

The trading method followed by this very special program does not try to guess which

way the market is going. The developers of the program freely admit that no one really knows which way the market is going to go, and if they did know, you can be sure that they would not be sharing it with you! Instead, this program sets up a grid of pre-programmed trades that occur in tune with the natural up and down movements of the market, whenever they might occur. And on top of that, the program is so conservative with each trade, that it can be proven mathematically that your account will be able to withstand an extreme movement of the specially selected currency pair that the program will trade for you to the extent that if the price of that currency pair was to go down beyond the very lowest price it has ever been at historically, and then go up beyond the very highest point it has ever been at historically, both your account and the expert advisor program monitoring it will simply yawn and say, "that was interesting. What's next?"

You don't have to take my word for it. When you purchase this program, you can easily test it for yourself on a demo trading account. After a short while of seeing this thing in action on your behalf in your demo account, you will be more than ready to put it to work for you on a live account!

Along with the expert advisor program, you will receive instructions on how to use it, and exactly what currency pair to trade it on. In actual fact, the expert advisor is preset with all the correct settings to trade that particular pair in the safe manner already described, so all you practically have to do is put it into the designated folder of the Metatrader trading platform on your computer and just turn it on and let it go to work. It is really that simple to use.

You will also receive a rundown of the mathematical proof that I mentioned, explaining in detail just how and why this trading method is so safe in comparison with other methods of trading the Forex Market. And of course, you will also receive a complete rundown of historical back testing results going back more than a year. (These back tests were not optimized in any way. They were done using the same stock, out-of-the-box settings that you will use in your trading.)

At this point, you may be skeptical, and I can't honestly say that I blame you. You may be thinking that it really can't be that easy, and who could blame you for thinking that way? All I can tell you is that this is the **real deal**, and the proof of that is that I have my own money on the line, being traded in a live account with this particular expert advisor program. And I will tell you that I absolutely love it! I love waking up in the morning and looking at my screen to see how much my computer made for me overnight!

Please hear me when I tell you that I am NOT saying that this method of growing your money is as safe as putting it in a bank account at 3% per year interest. There is always risk in the Forex Market, and you must be willing to assume that risk. However, by following the exact system that is being presented to you, you are going a long way towards mitigating that risk so that it becomes much more tolerable. And when you

consider inflation, you really can't say that putting your money in a bank account that earns 3% per year is risk free either, because you are bearing the risk that your money will be worth less at the end of the year, due to the ravages of inflation. Another concern with the safety of a bank account is the FDIC insurance that covers your account. The truth is that the FDIC has reserves enough to cover only 2% of of insured deposits in the U.S. Once enough banks fail, it will be interesting to see how long it takes to get your money from the FDIC. Not to mention the fact that your deposits are insured only up to \$100,000. Anything more than that is your loss.

But enough of that. This is not intended to be an exercise in negativity! This is intended for those who are of a positive mindset and who are ready to take positive action to secure their financial future. If you are ready to take the next step and download the free trial of this remarkable expert advisor program, go to:

<http://www.forex-goldmine.com>

You can download the software and start using it immediately after your purchase.

Please note that there is a generous affiliate program available at the forex-goldmine.com web site for marketers who are interested in earning referral commissions on sales of this remarkable trading software.

I wish you the best as you begin your new endeavor of investing for safety and a decent return in the Forex Market, with the help of the remarkable RoboMiner software.
